

Johnson 3P

Latest update from me. Loco ready for the first steaming. The only thing left to do is the wiring for the electronic water gauge which Charles helped me with by producing the printed circuit board. It goes under the coal area at the front of the tender and I hope to fix the LED s in a dummy coal load to help to hide them a bit.

It is my representation of a Johnson 3P. The other loco is my G1 Project which is a 4F. It's the loco that started me in Gauge 1.
