

More Pipe Bending

After Richards offering of pipe bending I thought I would share some that I have been doing. The first photo is of a displacement lubricator for my G1 loco. The others show it in position and the pipework for it and the piping from the gas tank at the bottom to the gas valve on the right and on to the burner in the centre.

The radius of the bends are $\frac{3}{16}$ " and $\frac{1}{4}$ " and the pipe is $\frac{1}{8}$ " od.
